

- Create a Custom Size file in Canva 3x4" Tall (this is the size of where we can etch a bottle)

- Upload the png file to you canva template, and drag it to make it bigger and fill the area you want to see the etching.

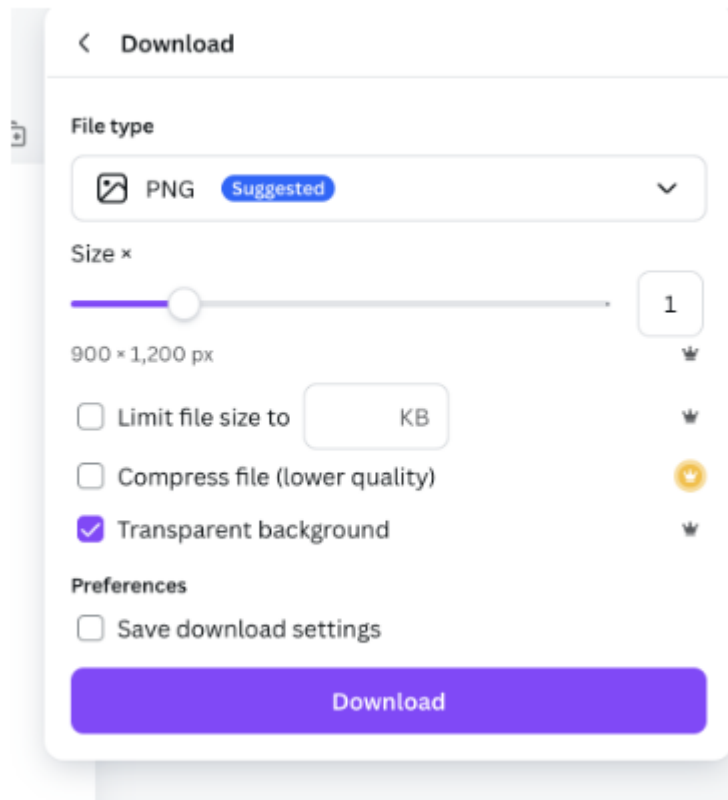

RESIZE >>>

- Download and save the resized logo file as a PNG
- If you have a Pro Canva account, you can download the file with the "Transparent background"
OR you can use a free site to do this: <https://www.remove.bg/>
(If you don't remove the white background - this is why you will see a big black box on the

mockup tool)

- Then go to the mockup tool and load your resized PNG file that has the white background removed!
